## 124-43

## CARBON FILLED, WATERBORNE, LOW V.O.C., FLEXOGRAPHIC, CONDUCTIVE INK \& COATING

DESCRIPTION: 124-43 is a carbon filled waterborne, low V.O.C., electrically conductive ink and coating, suitable for application by flexographic methods. This product features adhesion to Kapton, glass, and a variety of other surfaces. Unlike conventional conductive materials, this product is very resistant to flexing and creasing. Some applications for 124-43 include, but are not limited to, medical electrodes, polymer thick film circuitry, and membrane switches and static elimination.

## TYPICAL CURED PROPERTIES:

| Viscosity (cps.) | 1100 |
| :--- | :--- |
| Crease Resistance | Excellent |
| Sheet Resistivity, $100^{\circ} \mathrm{C}$ cure ( $\Omega / \mathrm{sq} . / \mathrm{mil}$. max.) | 20 |
| Solderable | No |
| Hydrolytic Stability | Excellent |
| Useful Temperature Range $\left({ }^{\circ} \mathrm{C}\right)$ | -55 to +140 |
| Thermal Stability $\left({ }^{\circ} \mathrm{C}\right)$ | Good to 175 |
| V.O.C.'s grams/liter | 139 |

SUGGESTED HANDLING \& CURING: Before using mix well to re-suspend filler. 124-43 is supplied at a viscosity suitable for flexographic printing. This product can be thinned further with distilled water. Best properties are obtained on a variety of substrates by curing for 10 minutes at $100^{\circ} \mathrm{C}$. Good properties are also obtained on a variety of substrates by curing at temperatures ranging from $50^{\circ} \mathrm{C}$ to $175^{\circ} \mathrm{C}$. End user is advised to experimentally determine temperature and time best suited for individual applications.

STORAGE: Shelf Life: 6 months at $21^{\circ} \mathrm{C}$. DO NOT ALLOW TO FREEZE.
