

127-16**ELECTRICALLY CONDUCTIVE COATING**

DESCRIPTION: 127-16 is an electrically conductive ink, coating and adhesive suitable for application by stamping, dipping and syringe dispensing. This system is designed to maintain stable viscosity during all application methods and has a low odor. The product features excellent adhesion to Kapton, Mylar, glass and a variety of other substrates. Unlike conventional conductive materials, this product is very resistant to abrasion, scratching and thermal aging. Some applications for 127-16 include, but are not limited to, emi/rfi shielding of polyimide flexible circuits, polymer thick film circuitry, membrane switches, electrical attachments for surface mounted devices, and coatings for tantalum capacitors. 127-16 is a higher viscosity version of EXP 2626-16i.

TYPICAL CURED PROPERTIES:

Viscosity (cps)	6000
Filler	Silver
Percent Silver Cured	> 68
Settling Rate (mL/hr)	0.027
Volume Resistance, max. (Ω -cm)	0.0001
Solderable	No
Hydrolytic Stability	Excellent
Useful Temperature Range ($^{\circ}$ C)	-55 to +250
Thermal Stability ($^{\circ}$ C)	Good to +325

SUGGESTED HANDLING & CURING: 127-16 is ready to use as supplied. Further thinning may be accomplished by adding small amounts of butyl cellosolve acetate and/or CMI Thinner 102-03. Prior to using, be certain to resuspend filler. Best properties, for most applications, result when cured for 1 hour at 175 $^{\circ}$ C with a post cure of 1 hour at 200 $^{\circ}$ C. Good properties are obtained on a variety of substrates by curing at temperatures ranging from 50 $^{\circ}$ C to 175 $^{\circ}$ C. End user is advised to experimentally determine temperature and time best suited for individual applications.

STORAGE: Shelf life: 3 months at 25 $^{\circ}$ C; or 6 months at 5 $^{\circ}$ C; or 12 months at -10 $^{\circ}$ C.

SAFETY & HANDLING: Use with adequate ventilation. Keep away from sparks and open flames. Avoid prolonged contact with skin and breathing of vapors. Wash with soap and water to remove from skin.
